

DVR File System Installer – Adding additional hard drives to the DVR System.

Step 1 – You need to format the hard drive that you want to add to the DVR system. Remember that this will erase all data on the hard drive.

Step 2 – Now go to Start – All Programs or Programs – SKY SYS DVR – File System Installer.

Step 3 – On the left side select the new hard drive and click add.

Step 4 – Once the hard drive is added to the right side, now select that hard drive and click on Initialization.

Step 5 – Make sure you select quick initialization and click on start.

Once the process is completed, close all windows and restart the DVR system by going to Start and Restart Computer.
